

## The accessories that come in your case:

reeds vibrate to make sound.

a neck strap helps hold the sax.

cork grease helps put the mouthpiece on the crook.

the pull through is used to help keep the sax clean.

## Setting up:

1 Wet the reed. Put the reed in your mouth or in a glass of water.

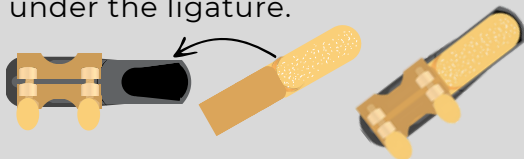

2 Loosen the ligature.

This holds the reed on the mouthpiece.

3 Place the reed flat side down on the mouthpiece, slide it under the ligature.

There should be a fingernail width of space for air to go through.

4 Tighten the ligature.

5 Put the mouthpiece on the crook.

Never force anything!  
Use cork grease on the cork if it is stiff.

6 Put the neck strap around your neck.

7 Attach the neck strap hook or clip to the ring of the saxophone body.

8 Loosen the neck screw on the body of the saxophone, then attach the crook. Tighten the screw. Ensure the reed is still in place.

9 Now make any final adjustments on the neck strap and crook angle. Remember: the saxophone comes to you, not you to it!
